**Developments in Clinical and Experimental Neuropsychology** John R. Crawford 1989-08-01 The chapters published in this volume developed from presentations, and their associated discussions at a conference organised by the Scottish Branch of the British Psychological Society, held at Rothesay, Isle of Bute, Scotland in September 1987. The goal of the conference was to bring together workers across a wide area of neuropsychological research to discuss recent technological advances, developments in assessment and rehabilitation, and to address theoretical issues of current interest. Thus, the chapters in this book include contributions on the use of Magnetic Resonance Imaging and Single Photon Emission Computed Tomography in neuropsychological research, studies of hemi spheric specialisation and cooperation, alcoholic and Alzheimer type dementia, prosopagnosia and facial processing, the assessment, management and rehabilitation of memory problems, the assessment of premorbid intellectual status and issues in developmental neuropsychology. Many of those engaged in research and clinical practice in neuropsychology encounter a range of topic at least as wide as this in their professional lives. The opportunity for researchers and clinicians to discuss some of the key issues in the field was invaluable and we hope that readers gain as much from the material presented here as the participants did from the meeting itself.

**Film** Maria Pramaggiore 2008-07-31 "Film: A Critical Introduction" provides a comprehensive framework for studying films, with an emphasis on writing as a means of exploring film's aesthetic and cultural significance. This text's consistent and comprehensive focus on writing allows students to master film vocabulary and concepts while learning to formulate rich interpretations. Part I introduces readers to the importance of film analysis, offering helpful strategies for discerning the way films produce meaning. Part II examines the fundamental elements of film, including narrative form, mise en scene, cinematography, editing, and sound, and shows how these concepts can be used to interpret films. Part III moves beyond textual analysis to explore film as a cultural institution and introduce students to essential areas of film studies research.

Lived Religion in the Ancient Mediterranean World Valentino Gasparini 2020-04-06 The Lived Ancient Religion project has radically changed perspectives on ancient religions and their supposedly personal or public character. This volume applies and further develops these methodological tools, new perspectives and new questions. The religious transformations of the Roman Imperial period appear in new light and more nuances by comparative confrontation and the integration of many disciplines. The contributions are written by specialists from a variety of disciplinary contexts (Jewish Studies, Theology, Classics, Early Christian Studies) dealing with the history of religion of the Mediterranean, West-Asian, and European area from the (late) Hellenistic period to the (early) Middle Ages and shaped by their intensive exchange. From the point of view of their respective fields of research, the contributors engage with discourses on agency, embodiment, appropriation and experience. They present innovative research in four fields also of theoretical debate, which are "Experiencing the Religious", "Switching the Code", „A Thing Called Body“ and "Commemorating the Moment".

**Dub** Michael Veal 2007-04-30 Winner of the ARSC's Award for Best Research (History) in Folk, Ethnic, or World Music (2008) When Jamaican recording engineers Osbourne "King Tubby" Ruddock, Errol Thompson, and Lee "Scratch" Perry began crafting "dub" music in the early 1970s, they were initiating a musical revolution that continues to have worldwide influence. Dub is a sub-genre of Jamaican reggae that flourished during reggae's "golden age" of the late 1960s through the early 1980s. Dub involves remixing existing recordings—electronically improvising sound effects and altering vocal tracks—to create its unique sound. Just as hip-hop turned phonograph turntables into musical instruments, dub turned the mixing and sound processing technologies of the recording studio into instruments of composition and real-time improvisation. In addition to chronicling dub's development and offering the first thorough analysis of the music itself, author Michael Veal examines dub's social significance in Jamaican culture. He further explores the "dub revolution" that has crossed musical and cultural boundaries for over thirty years, influencing a wide variety of musical genres around the globe.

Guenther 1999-10-06 The exercises and studies in this book are written to supplement and augment the numerous elementary method books available. The preliminary exercises stress the fundamentals of scales, chords, and intervals in the various keys. The importance of these fundamental exercises must be recognized as the foundation of fine playing. The etudes develop style, tone, and interpretation. Some of these studies are designed to be played by a group, or in a sectional rehearsal, if desired. Careful attention to correct fingerings, rhythms, and phrasing in these and other studies will result in musically satisfying performance. This book will be found to be useful for individual and class instruction.
