Reading the Architecture of the Underprivileged Classes Nnamdi Elleh 2016-04-01 The expansion of cities in the late C19th and middle part of the C20th in the developing and the emerging economies of the world has one major urban corollary: it caused the proliferation of unplanned parts of the cities that are identified by a plethora of terminologies such as bidonville, favela, ghetto, informal settlements, and shantytown. Often, the dwellings in such settlements are described as shacks, architecture of necessity, and architecture of everyday experience in the modern and the contemporary metropolis. This volume argues that the types of structures and settlements built by people who do not have access to architectural services in many cities in the developing parts of the world evolved simultaneously with the types of buildings that are celebrated in architecture textbooks as 'modernism.' It not only shows how architects can learn from traditional or vernacular dwellings in order to create habitations for the people of low-income groups in public housing scenarios, but also demonstrates how the architecture of the economically underprivileged classes goes beyond culturally-inspired tectonic interpretations of vernacular traditions by architects for high profile clients. Moreover, the essays explore how the resourceful dwellings of the underprivileged inhabitants of the great cities in developing parts of the world pioneered certain concepts of modernism and contemporary design practices such as sustainable and de-constructivist design. Using projects from Africa, Asia, South and Central America, as well as Austria and the USA, this volume interrogates and brings to the attention of academics, students, and practitioners of architecture, the deliberate disqualification of the modern architecture produced by the urban poor in different parts of the world.

The Culture of Building Howard Davis 2006-05-12 The Culture of Building describes how the built world, including the vast number of buildings that are the settings for peoples everyday lives, is the product of building cultures--complex systems of people, relationships, building types, techniques, and habits in which design and building are anchored. These cultures include builders, bankers, architects, developers, clients, contractors, craftspeople, building inspectors, planners, and many others. The product of these cultures, which operate building after building, is the built world of cities and settlements. In this book, Howard Davis uses historical, contemporary, and cross-cultural examples to describe the nature and influence of these cultures. He shows how building cultures reflect the general cultures in which they exist, how they have changed over history, how they affect the form of buildings and cities, and how present building cultures, which are responsible for the contemporary everyday environments, may be improved. Following the development of the idea of building cultures using several historical examples, the book lays out a framework that puts such topics as craft and professionalism, the vernacular and nonvernacular, and design and construction in common frameworks. Although the book ranges widely over different cultures and historical periods, it emphasizes the transformations that took place in architecture and building practice from the late eighteenth century to the present. Finally, the book uses a series of contemporary examples that demonstrate the building culture as a living concept. These examples, which include built work as well as innovative processes that go beyond the work of architects alone, are described as the seeds that can help the emergence of a better build world. This beautiful book features over 260 color and black-and-white illustrations, most from the authors extensive collection of slides, and includes photographs, prints, and drawings from historical archives and contemporary architectural offices.

Play Among Books Miro Roman 2021-12-06 How does coding change the way we think about architecture? This question opens up an important research perspective. In this book, Miro Roman and his AI Alice_ch3n81 develop a playful scenario in which they propose coding as the new

literacy of information. They convey knowledge in the form of a project model that links the fields of architecture and information through two interwoven narrative strands in an "infinite flow" of real books. Focusing on the intersection of information technology and architectural formulation, the authors create an evolving intellectual reflection on digital architecture and computer science.

Building for Well-Being Traci Rose Rider 2021-12-29 Building for Well-Being is the first introduction to health-focused building standards for design and construction professionals. More than a summary of the state of the field, this practical resource guides designers, builders, developers, and owners through considerations for incorporating WELL®, Fitwel®, and other systems from the planning phase to ground-breaking and beyond. Side-by-side comparisons of established and emerging health-focused standards empower building professionals to select the most appropriate certifications for their projects. Drawing on the authors' backgrounds in sustainable design and public health, chapters on the evolution of the green building movement and the relationship between health and the built environment provide vital context for understanding health-focused standards and certifications. The final chapter looks toward the future of health and the built environment.

Chilean Modern Architecture Since 1950 Fernando Pérez Oyarzún 2010 Chilean architecture--along with that of Sao Paolo and Mexico City--sets a benchmark for the intersection of modernism with vernacular influences in Latin America. Culture, landscape, and the geology of this earthquake-prone region have all served as important filters for the practice of post-1950s design in Chile. This volume introduces the modern architecture of Chile to readers in the United States. Looking primarily at domestic architecture as a lens for studying the larger movement, Fernando Perez Oyarzun considers the relationship between theory and practice in Chile. As he shows in his chapter, during the early 1950s the School of Valparaiso offered the possibility of developing experimental projects accompanied by theoretical statements. There, visual artists considered poetry the starting point of modern architecture and contributed their radically modern views to the design process of the project. Next, Rodrigo Perez de Arce examines the material context of architecture in Chile: the availability of materials and technologies, the frequency of violent earthquakes and related seismic activity, and the nation's craft-based, labor-intensive building practices. He applies these considerations to a series of case studies to demonstrate how they interact with cultural, historical, economic, and even political influences. In the book's final chapter, Horacio Torrent reviews the interplay between the architectonic culture and modern shapes that came into sharp focus in the 1950s in Chile. In another series of case studies, he highlights the formation of a system of concepts, thought processes, instruments, and values that have given Chilean architecture a certain singularity during the last fifty years.

City at the Center of the World Ernesto Capello 2011-11-13 In the seventeenth century, local Jesuits and Franciscans imagined Quito as the "new Rome." It was the site of miracles and home of saintly inhabitants, the origin of crusades into the surrounding wilderness, and the purveyor of civilization to the entire region. By the early twentieth century, elites envisioned the city as the heart of a modern, advanced society—poised at the physical and metaphysical centers of the world. In this original cultural history, Ernesto Capello analyzes the formation of memory, myth, and modernity through the eyes of Quito's diverse populations. By employing Mikhail Bakhtin's concept of chronotopes, Capello views the configuration of time and space in narratives that defined Quito's identity and its place in the world. He explores the proliferation of these imaginings in architecture, museums, monuments, tourism, art, urban planning, literature, religion, indigenous rights, and politics. To Capello, these tropes began to crystallize at the end of the nineteenth century, serving as a tool for distinct groups who laid claim to history for economic or political gain during the upheavals of modernism. As Capello reveals, Quito's society and its stories mutually constituted each other. In the process of both destroying and renewing elements of the past, each chronotope fed and perpetuated itself. Modern Quito thus emerged at the crux of Hispanism and Liberalism, as an independent global society struggling to keep the memory of its colonial and indigenous roots alive.

Music and Cultural Rights Andrew N. Weintraub 2024-04-22 Framing timely and pressing questions concerning music and cultural rights, this collection illustrates the ways in which music--as a cultural practice, a commercial product, and an aesthetic form--has become enmeshed in debates about human rights, international law, and struggles for social justice. The essays in this volume examine how interpretations of cultural rights vary across societies; how definitions of rights have evolved; and how rights have been invoked in relation to social struggles over cultural access, use, representation, and ownership. The individual case studies, many of them based on ethnographic field research, demonstrate how musical aspects of cultural rights play out in specific cultural contexts, including the Philippines, China, Hawaii, Peru, Ukraine, and Brazil. Contributors are Nimrod Baranovitch, Adriana Helbig, Javier F. Leon, Ana María Ochoa, Silvia Ramos, Helen Rees, Felicia Sandler, Amy Ku'uleialoha Stillman, Ricardo D. Trimillos, Andrew N. Weintraub, and Bell Yung.

Beyond Modernist Masters Felipe Hernández 2009-11-20 Latin America has been an important place for architecture for many decades. Masters like Barragán, Dieste, Lina Bo Bardi, and Niemeyer pointed the way for architectural design all over the world, and they continue to do so today. Their approach to colors, materials, and walls had a deep and lasting influence on architectural modernism. Since then, however – and especially in the last fifteen years – architecture on the continent has continued to evolve, and a lively and extremely creative architecture scene has developed. The work of Latin American architects and city planners is often guided by social issues, for example, the approach to informal settlements on the outskirts of big cities, the scarcity of housing and public space, the availability of affordable transportation, and the important role of cultural infrastructure – such as schools, libraries, and sports facilities – as a catalyst for neighborhoods. Within this context, the book considers numerous projects that have prompted discussion and provided fresh impetus all across Latin America. Outstanding projects like the Santo Domingo Library in Medellín, Colombia, by Giancarlo Mazzanti; Alberto Kalach's Liceo Franco-Mexicano in Mexico; and the works of Alejandro Aravena in Chile show that recent Latin American architecture is more than capable of holding its own beside the works of the founders. Felipe Hernández is an architect and professor of Architectural Design, History and Theory at The University of Liverpool. He attended an MA in Architecture and Critical Theory, graduating with distinction in 1998, and received his PhD from the University of Nottingham in 2003. He has taught at the Bartlett School of Architecture (UCL), The Universities of Nottingham, Sheffield, East London and Nottingham Trent in the United Kingdom as well as at Brown University and Roger Williams University in USA. Felipe has published numerous essays and articles examining the situation of contemporary Latin American cities and revealing the multiplicity of architectural practices that operate simultaneously in the constant re-shaping of the continent's cities.

Latin American Studies Ana María Cobos 2002 The Latin American studies collections at many community, junior and four year colleges, and large public libraries often contain materials that are too specialized, uneven, outdated, incomplete, or written in Spanish or Portuguese--thus rendering them essentially useless to English-reading patrons. Better materials are out there, but librarians simply have not had, until now, a good resource guide to help in locating them. This work, designed as an acquisitions tool for colleges and libraries, is an annotated bibliography

of approximately 1,400 recommended books published from 1986 through 2000 in the field of Latin American studies. It is divided into chapters that deal with reference works, descriptive accounts and travel guides, the humanities, language and literature, the social sciences, and science and technology. For the purposes of this book, Latin America is defined as all geographic locations south of the Rio Grande. While these are chiefly Spanish and Portuguese speaking regions, works about French, English, and Dutch speaking areas are also included. The literary works of authors living abroad are included if they are considered quintessentially Latin American. Periodicals, children's literature, audio-visual resources, and works about the Hispanic and Latino experience in the United States are not included. The majority of the works presented here were selected based on reviews from Booklist, Choice, Hispanic American Historical Review, Library Journal, Los Angeles Times Book Review, New York Review of Books, New York Times Book Review and Publisher's Weekly; also consulted were the catalogs of major university presses that focus on Latin American studies.

La arquitectura moderna en Latinoamérica Ana Esteban Maluenda 2013-02-04 Este libro versa sobre la arquitectura moderna que se construyó en Latinoamérica entre las décadas de 1930 y 1960, y sobre el pensamiento que la sustentó. Es una 'antología de autores'. Del mexicano Juan O'Gorman al chileno Alberto Cruz, la selección abarca a los ya 'clásicos modernos': Lúcio Costa, Oscar Niemeyer, Carlos Raúl Villanueva y Luis Barragán. Se trata, además, de una 'antología de obras' escogidas de cada arquitecto que sirven para exponer las intenciones y los pensamientos de su autor. Y se trata, por último, de una 'antología de textos'. Se incluyen fragmentos fundamentales, artículos o capítulos de libros de los arquitectos.

Brasil, arquiteturas após 1950 Maria Alice Junqueira Bastos 2010 A work destined to become a reference in the study and teaching of architecture in Brazil. According to the critic and historian Catalan Josep Maria Montaner, who prefaces, it is "an important fact because, by their quality, will be situated in the tradition of critical interpretations of Brazilian contemporary architecture, and a required text because it brings a new vision was vital to refocus the contemporary history of Brazilian architecture, trapped by prejudice, topics and schemes, usually emphasizing a supposed golden age and unsurpassed. "Carefully constructed four hands by Mary Alice Junqueira Bastos and Ruth Verde Zein, the book, an initiative of the publisher perspective, helps fill many gaps in Brazilian historiography on the subject, is the breadth of research that examines works and projects of all types, the verticality, describing relevant experiences and works closely with sensitivity and technical finesse, or by situating the project as critically event technically and culturally engaged in the political process of building a Brazilian identity - an identity but not any, but one that also imposes itself as the protagonist of an international production. With a vast repertoire of works and subjects, moving through corridors and apartments for exclusive bus routes, analyzing the techniques and plastic properties of the building, and also its relevance today as their territorial and language, Bastos and Zein were not intimidated before the size of the contract and the responsibility to show strengths and weaknesses of the various architectures Brazil the last six decades.

Post-Ductility Michael Bell 2012-06-27 The third book in the series from Columbia University is focused on metals. Metals, as surface or structure as the generators of space play a role in nearly every strain of modernization in architecture. They define complete geographies of work, production, and political life. Non-architectural metals delivered in automobiles, and hard goods in the United States and worldwide have all been sourced as the engines of the sprawling late twentieth-century city in all of its forms. But in the received aspects of architectural history,

metals, and in particular steel, remain less diluted; they are presented as intrinsic to the profession as material precedes concepts they are carriers of architectural meaning. Few concepts are as central in structural engineering as the ability of a material to sustain plastic deformation under tensile stress the standardization of historically known deformation limits or ductile properties in most materials allows architects and engineers to keep the analysis of structure within known parameters of finite element analysis rather than materials science. If the goal is avoid fracture, the boundaries are set and the limits of ductility are observed. Post-Ductility refers to the literal aspects of material behavior in this case of metals but also of aspects of architectural and urban space that are measured by less verifiable but nonetheless real quotients of stress and strain. It is the tension and compression of space that gives form or coherence to form. In either the case of engineering and architecture, formerly daunting degrees of risk seem to have been diminished; new levels of sophistication in calculation lower the risk tolerance for fracture, while more metaphoric readings of limits in architectural and urban space seem to have been long surpassed, at times with abandon. The counter-effort has been quite strong if not successful: there are those that want to recreate dense cities by means of compression and there are immense forces of spatial extension by way of economics, communication and transit. Space is pulled to elastic limits and made thin as highly malleable materials such as gold or lead as it is also often re-compressed as forms of urban density. If metals are a significant origin for architecture and indeed whole cities—from buildings to automobiles and labor, then what are the limits or equations that offer a new evaluation of both metals, but also of material in a wider sense, as a determining component of the built world? What does an engineer and architect bring to this arena in both local and global circumstances?

Iberia and the Americas John Michael Francis 2005-11-21 This comprehensive encyclopedia covers the reciprocal effects that the politics, foreign policy, and culture of Spain, Portugal, and the American nations have had on one another since the time of Columbus. From the discovery of Newfoundland and Labrador by Portuguese explorer Gaspar Corte Real in 1501 to the phenomenal Hollywood careers of Spanish movie stars such as Antonio Banderas and Penelope Cruz, *Iberia and the Americas* traces 500 years of Iberian influence on the Americas and vice versa. Featuring six introductory essays and a chronology of key events, this three-volume encyclopedia examines more than five centuries of transatlantic encounters. Students of a wide range of disciplines, as well as the lay reader, will appreciate this exhaustive survey, which traces Spanish and Portuguese influence throughout the Americas and highlights how Iberian cultures have in turn been enriched by the diverse cultures of the Americas.

The Oxford Dictionary of Architecture James Stevens Curl 2015-02-26 Containing over 6,000 entries from Aalto to Zwinger and written in a clear and concise style, this authoritative dictionary covers architectural history in detail, from ancient times to the present day. It also includes concise biographies of hundreds of architects from history (excluding living persons), from Sir Francis Bacon and Imhotep to Liang Ssu-ch'eng and Francis Inigo Thomas. The text is complemented by over 260 beautiful and meticulous line drawings, labelled cross-sections, and diagrams. These include precise drawings of typical building features, making it easy for readers to identify particular period styles. This third edition of *The Oxford Dictionary of Architecture* has been extensively revised and expanded, with over 900 new entries including hundreds of definitions of garden and landscape terms such as Baroque garden, floral clock, hortus conclusus, and Zen garden-design. Each entry is followed by a mini-bibliography, with suggestions for further reading. The full bibliography to the first edition (previously only available online) has also been fully updated and expanded, and incorporated into this new edition. This is an essential work of reference for anyone with an interest in architectural and garden history. With clear descriptions providing in-depth analysis, it is invaluable for students, professional architects, art historians, and anyone interested in architecture and garden design, and provides a fascinating wealth of information for the general reader.

Into the Archive Kathryn Burns 2010-09-27 Writing has long been linked to power. For early modern people on both sides of the Atlantic, writing was also the province of notaries, men trained to cast other people's words in official forms and make them legally true. Thus the first thing Columbus did on American shores in October 1492 was have a

notary record his claim of territorial possession. It was the written, notarial word—backed by all the power of Castilian enforcement—that first constituted Spanish American empire. Even so, the Spaniards who invaded America in 1492 were not fond of their notaries, who had a dismal reputation for falsehood and greed. Yet Spaniards could not do without these men. Contemporary scholars also rely on the vast paper trail left by notaries to make sense of the Latin American past. How then to approach the question of notarial truth? Kathryn Burns argues that the archive itself must be historicized. Using the case of colonial Cuzco, she examines the practices that shaped document-making. Notaries were businessmen, selling clients a product that conformed to local "custom" as well as Spanish templates. Clients, for their part, were knowledgeable consumers, with strategies of their own for getting what they wanted. In this inside story of the early modern archive, Burns offers a wealth of possibilities for seeing sources in fresh perspective.

Spaces Speak, Are You Listening? Barry Blesser 2009-09-18 How we experience space by listening: the concepts of aural architecture, with examples ranging from Gothic cathedrals to surround sound home theater. We experience spaces not only by seeing but also by listening. We can navigate a room in the dark, and "hear" the emptiness of a house without furniture. Our experience of music in a concert hall depends on whether we sit in the front row or under the balcony. The unique acoustics of religious spaces acquire symbolic meaning. Social relationships are strongly influenced by the way that space changes sound. In *Spaces Speak, Are You Listening?*, Barry Blesser and Linda-Ruth Salter examine auditory spatial awareness: experiencing space by attentive listening. Every environment has an aural architecture. The audible attributes of physical space have always contributed to the fabric of human culture, as demonstrated by prehistoric multimedia cave paintings, classical Greek open-air theaters, Gothic cathedrals, acoustic geography of French villages, modern music reproduction, and virtual spaces in home theaters. Auditory spatial awareness is a prism that reveals a culture's attitudes toward hearing and space. Some listeners can learn to "see" objects with their ears, but even without training, we can all hear spatial geometry such as an open door or low ceiling. Integrating contributions from a wide range of disciplines—including architecture, music, acoustics, evolution, anthropology, cognitive psychology, audio engineering, and many others—*Spaces Speak, Are You Listening?* establishes the concepts and language of aural architecture. These concepts provide an interdisciplinary guide for anyone interested in gaining a better understanding of how space enhances our well-being. Aural architecture is not the exclusive domain of specialists. Accidentally or intentionally, we all function as aural architects.

A Companion to Modern and Contemporary Latin American and Latina/o Art Alejandro Anreus 2021-10-26 In-depth scholarship on the central artists, movements, and themes of Latin American art, from the Mexican revolution to the present *A Companion to Modern and Contemporary Latin American and Latinx Art* consists of over 30 never-before-published essays on the crucial historical and theoretical issues that have framed our understanding of art in Latin America. This book has a uniquely inclusive focus that includes both Spanish-speaking Caribbean and contemporary Latinx art in the United States. Influential critics of the 20th century are also covered, with an emphasis on their effect on the development of artistic movements. By providing in-depth explorations of central artists and issues, alongside cross-references to illustrations in major textbooks, this volume provides an excellent complement to wider surveys of Latin American and Latinx art. Readers will engage with the latest scholarship on each of five distinct historical periods, plus broader theoretical and historical trends that continue to influence how we understand Latinx, Indigenous, and Latin American art today. The book's areas of focus include: The development of avant-garde art in the urban centers of Latin America from 1910-1945 The rise of abstraction during the Cold War and the internationalization of Latin American art from 1945-1959 The influence of the political upheavals of the 1960s on art and art theory in Latin America The rise of conceptual art as a response to dictatorship and social violence in the 1970s and 1980s The contemporary era of neoliberalism and globalization in Latin American and Latino Art, 1990-2010 With its comprehensive approach and informative structure, *A Companion to Modern and Contemporary*

Latin American and Latinx Art is an excellent resource for advanced students in Latin American culture and art. It is also a valuable reference for aspiring scholars in the field.
